

PROCESS FOR MANUFACTURING A CELLULOSIC  
PAPER PRODUCT EXHIBITING REDUCED MALODOR

ABSTRACT OF THE INVENTION

A process for manufacturing a cellulosic paper product is provided. The process comprises forming an aqueous suspension of papermaking fibers; introducing a borate compound, preferably boric acid, into the aqueous suspension; depositing the aqueous suspension onto a sheet-forming fabric to form a wet web; and dewatering and drying the wet web. The process of the present invention provides cellulosic paper products exhibiting a reduced malodor upon re-wetting.
